Bagaya o Spaxuctoxpone.

(III) Air resistance acting on a falling body can be taken into account by the approximate relation for the acceleration:

$$a = \frac{dv}{dt} = g - kv,$$

where k is a constant. (a) Derive a formula for the velocity of the body as a function of time assuming it starts from rest (v = 0 at t = 0). [Hint: Change variables by setting u = g - kv.] (b) Determine an expression for the terminal velocity, which is the maximum value the velocity reaches.

HAYANSHOE YCNOBUE:
$$\frac{1}{k}$$
 ln $|g-k\cdot\theta|=C$

Γιος σταβιιμ κοκισταμτή θ (1):

 $t=-\frac{1}{k}$ ln $|g-k\cdot\tau|+\frac{1}{k}$ ln $|g-k\cdot\tau|+\frac{1}{k}$ ln $|g-k\cdot\tau|+\frac{1}{k}$ ln $|g-k\cdot\theta|=C$
 $t=-\frac{1}{k}$ ln

3)

просят найти v_{max} ими зкачение в момент насыщения заметин, что график функции v(t) монотонно возрастает (часть склейки v(t))
